

Use the animation, Course Intro.zip, to show the rationale of the course.

## Objectives

- ◆ In this session, you will learn to:
  - ◆ Introduce HTML
  - ◆ Create an HTML Web page

- ◆ A markup language:
  - ◆ Enables you to create attractive and interactive websites.
  - ◆ Provides a way to describe the structure of a Web page.
  - ◆ Specifies the code in the form of tags for defining, processing, and presenting the text on Web pages.
- ◆ The Web pages can be of the following types:
  - ◆ Static
  - ◆ Dynamic

### ◆ The Internet:

- ◆ Makes the Web pages and websites accessible to the users.
- ◆ Enables the organizations to share and access information.
- ◆ Is an interconnected network of computers across the globe.

### ◆ The World Wide Web (WWW):

- ◆ Is a collection of resources on varied topics that can be accessed through the Internet.
- ◆ Is a collection of Web pages that are scattered but interlinked.

- ◆ Hyper Text Markup Language (HTML):
  - ◆ Is a versatile markup language that is used to publish information as a Web page.
  - ◆ Provides tags that help in creating Web pages.
  - ◆ Allows the creation of hyperlinks to connect the Web pages.
- ◆ HTML is used to create Web pages using software applications known as editors.
- ◆ HTML editors are broadly classified into the following categories:
  - ◆ Text editor
  - ◆ Graphic editor

- ◆ A text editor is an application in which the HTML code is written for creating a Web page.
- ◆ Notepad and EditPlus are examples of text editors.
- ◆ The HTML code written inside a text editor is saved with the .htm or .html extension.

- ◆ A graphic editor enables you to embed an HTML element into a Web page by using the drag-and-drop functionality.
- ◆ Dreamweaver is an example of a graphic editor.

Use the simulation, [Dreamweaver.zip](#), to demonstrate how to create a Web page using Dreamweaver.

## Identifying the Basic Structure of an HTML Page

- ◆ An HTML document is created by using various tags and their attributes.
- ◆ Tags are markup codes enclosed in angular brackets.
- ◆ The following HTML tags are referred to as structural tags as they create the structure of an HTML document:
  - ◆ `<!DOCTYPE HTML>`
  - ◆ `<HTML>`
  - ◆ `<HEAD>`
  - ◆ `<BODY>`

### ◆ The <HEAD> tag:

- ◆ Is contained within the <HTML> and </HTML> tags.
- ◆ Is used to define the header of the HTML document.
- ◆ Can include the following tags:

## Exploring the <HEAD> Tag (Contd.)

### ◆ The <TITLE> tag:

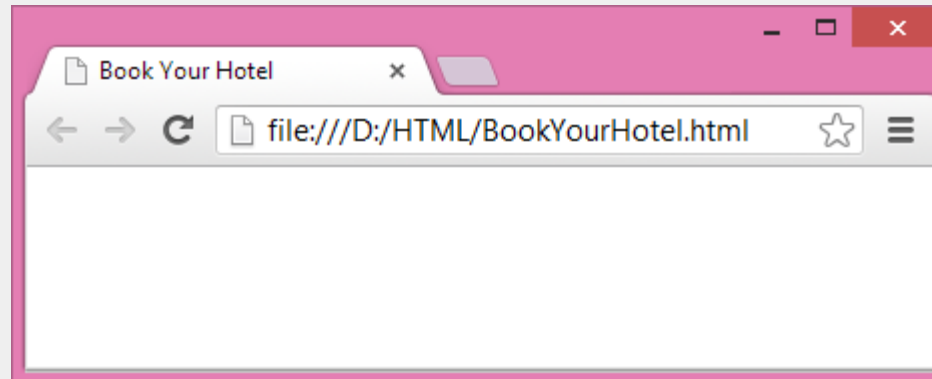

- ◆ Defines the title of the document.
- ◆ Can appear only once in the HTML document.
- ◆ For example:

```
<HEAD>
```

```
<TITLE> Book Your Hotel</TITLE>
```

```
</HEAD>
```

- ◆ The output of the preceding code snippet is displayed, as shown in the following figure.

### ◆ The <META> tag:

- ◆ Provides additional information about the current document in the form of name and value pairs.

- ◆ For example:

```
<META name="description" content="This website provides you  
the benefit of booking rooms in the best hotels of US">  
<META name="keywords" content="hotel, online, booking">  
<META name="author" content="Harry Anem">  
<META http-equiv="refresh" content="30">
```

### ◆ The <BASE> tag:

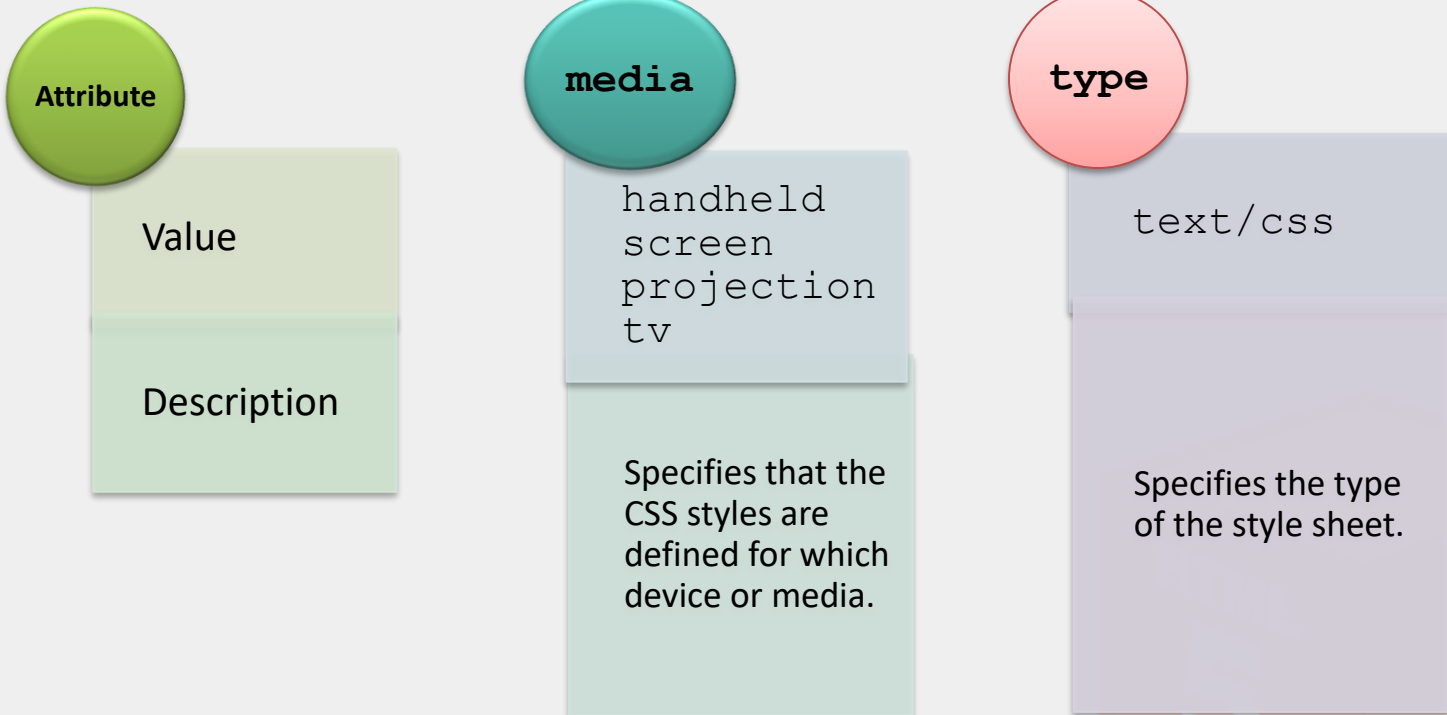

- ◆ Specifies a base URL or address for all the related links on a page.
- ◆ For example:

```
<HTML>
<HEAD>
<TITLE> The BASE Tag Example</TITLE>
<BASE href="d:/Images/"></BASE>
</HEAD>
<BODY>
<IMG src="img1.jpg"/>
<BR>
Best Hotels
</BODY>
</HTML>
```

### ◆ The <STYLE> tag:

- ◆ Defines the style information associated with the HTML document.
- ◆ Has the following attributes:

### ◆ The <LINK> tag:

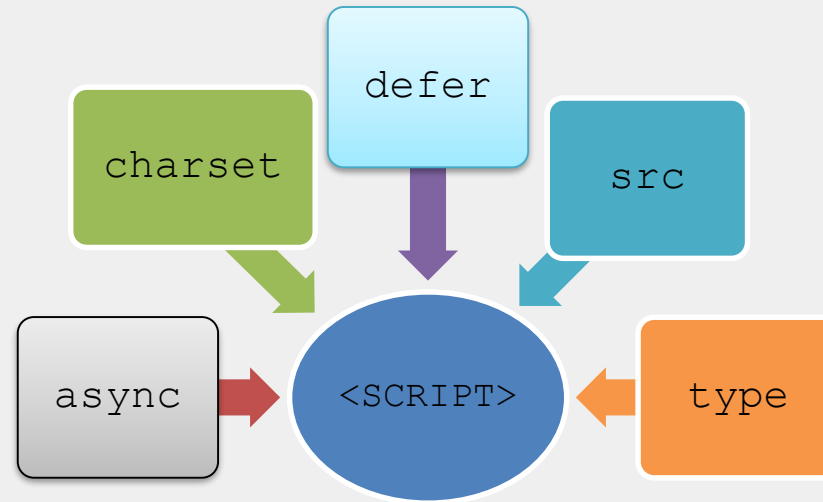

- ◆ Is used to establish the relationship of the current document with other documents in a website.
- ◆ Has the following attributes:

rel	• Establishes a link from the current document to the external document.
href	• Specifies the name or the URL of the linked document.
hreflang	• Specifies the language of the text used in the linked document.
media	• Specifies the device on which the linked document will be displayed.

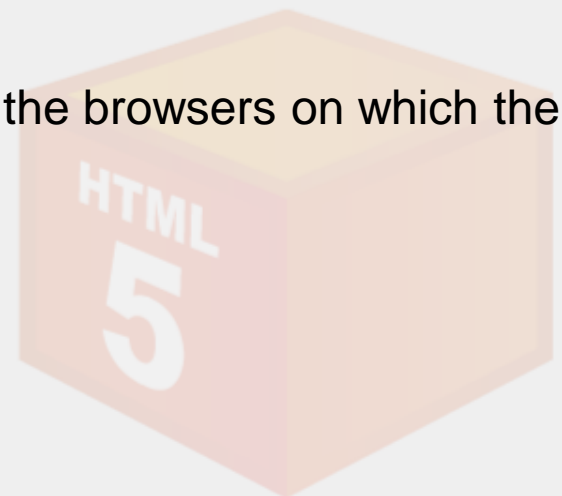

### ◆ The <SCRIPT> tag:

- ◆ Specifies the client-side script, such as JavaScript, associated with the document.
- ◆ Has the following attributes:

- ◆ The <NOSCRIPT> tag displays an alternate content on the browsers on which the scripts have been disabled.

- ◆ Which one of the following tags specifies a URL for all related links on a page?
- ◆ <BASE>
  - ◆ <STYLE>
  - ◆ <LINK>
  - ◆ <META>

◆ Solution:

◆ <BASE>

- ◆ The body section:
  - ◆ Is the central part of the HTML document required to display content on the Web page.
  - ◆ Begins with the <BODY> tag.
  - ◆ Contains the actual visible content of an HTML document.

- ◆ The heading tags:
  - ◆ Are used to define the headings that specify the main idea of the content.
  - ◆ Range from <H1> to <H6>.
- ◆ The paragraphs are added in an HTML document using the following tags:

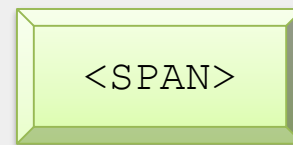

**<P>**

**<DETAILS>**

**<SUMMARY>**

- ◆ The layout:
  - ◆ Specifies how various elements or content should be displayed on the Web page.
  - ◆ Is defined by using the following tags:

- ◆ The content of a Web page can be formatted by using the following tags:

## Exploring the <BODY> Tag (Contd.)

◆ Images are added to a Web page:

- ◆ To add an artistic value.
- ◆ To enhance its visual appeal.
- ◆ In the following formats:

## Exploring the <BODY> Tag (Contd.)

- ◆ Using the <IMG> tag that has the following attributes:

alt	<ul style="list-style-type: none"><li>• Is used to specify an alternate text for an image.</li></ul>
height and width	<ul style="list-style-type: none"><li>• Is used to specify the size in which the image should be displayed.</li></ul>
src	<ul style="list-style-type: none"><li>• Is used to specify the URL of the image.</li></ul>

## Exploring the <BODY> Tag (Contd.)

- ◇ Navigation links are added:
  - ◇ To navigate between the Web pages.
  - ◇ By using the <A> tag that has the following attributes:

`href`

- Specifies the URL of the document that opens on clicking the hyperlink.

`target`

- Is used to open the HTML document in a specified frame or window.

## Exploring the <BODY> Tag (Contd.)

- ◆ The multimedia components are added:
  - ◆ To embed audio and video in the website.
  - ◆ To improve the visual effect of the website.
  - ◆ By using the following tags:

<AUDIO>

- Is used to include an audio file in a Web page.

<VIDEO>

- Is used to display a video file on a Web page.

- ◆ Measuring data and displaying a progress bar:

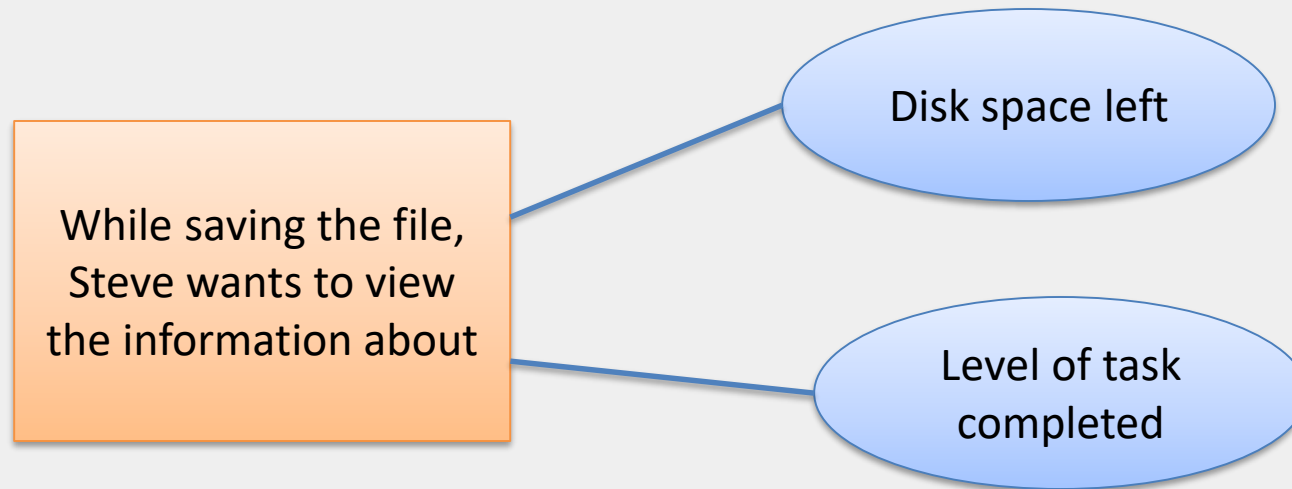

Steve is downloading a file  
from a website

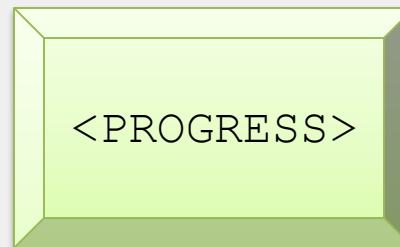

Saving it in his system

◇ These tasks can be done by using the following tags:

- ◆ In this session, you learned that:
  - ◆ HTML is a markup language that enables you to create attractive and interactive websites.
  - ◆ Web pages are either static or dynamic.
  - ◆ An HTML page contains the following structural tags:
    - ◆ `<!DOCTYPE HTML>`
    - ◆ `<HTML>`
    - ◆ `<HEAD>`
    - ◆ `<BODY>`
  - ◆ The following tags are used in the `<HEAD>` section of an HTML document:
    - ◆ `<TITLE>`
    - ◆ `<META>`
    - ◆ `<BASE>`
    - ◆ `<STYLE>`
    - ◆ `<LINK>`
    - ◆ `<SCRIPT>`
    - ◆ `<NOSCRIPT>`
  - ◆ You can use the following tags to add new paragraphs in an HTML document:
    - ◆ `<P>`
    - ◆ `<DETAILS>`
    - ◆ `<SUMMARY>`

- ◆ To define a layout, you can use the following tags:
  - ◆ `<DIV>`
  - ◆ `<SPAN>`
- ◆ The following formatting tags are used to format the content in an HTML document:
  - ◆ `<B>`
  - ◆ `<I>`
  - ◆ `<U>`
  - ◆ `<LI>`
  - ◆ `<BR>`
  - ◆ `<HR>`
- ◆ You can use the `<IMG>` tag to insert images in a website.
- ◆ You can add multimedia elements in a Web page by using the following tags:
  - ◆ `<AUDIO>`
  - ◆ `<VIDEO>`
- ◆ The `<METER>` tag specifies a scalar measurement within a known range.
- ◆ The `<PROGRESS>` tag is used to display the progress of a task.
